Sydney, 24 March 2025

Strategic contract wins for Autonomous coding – Clarification

Beamtree Holdings Limited (“**Beamtree**” or “**the Company**” or “**the Group**”) (ASX: BMT) refers to its “Strategic contract wins for Autonomous coding” announcement lodged earlier today and provides the following information on the customer under each contract:

1. Barwon Health in Australia;
2. Milton Keynes University NHS Foundation Trust in the UK;
3. a leading Health Sciences medical centre in Canada. Beamtree confirms that it does not consider the identity of the customer to be information that a reasonable person would expect to have a material effect on the price or value of its securities and that this announcement contains all material information relevant to assessing the impact of the contract on the price or value of its securities and is not misleading by omission.

The above contract wins provide evidence of the conversion of our sales pipeline outlined in our first half reporting. Each contract is subject to the usual rights of termination for non-performance and there is no other material information regarding each contract which is relevant to assessing the impact of each contract on the price or value of the Company’s securities.

Although each contract is not financially material, these first wave contract wins mark an important strategic achievement for Beamtree, a world leader in clinical record coding technology, by demonstrating the demand for this breakthrough AI technology in three of its key geographical markets.

Authorised for release by the CEO and CFO of Beamtree

About Beamtree

A leading provider of AI decision support and data insights solutions, Beamtree supports healthcare providers globally. They believe in creating a better future for health by turning data into insights and action through automation. They help solve real-world problems in healthcare by developing smart tools that aim to improve patient outcomes. Their solutions and services offer customers an unrivalled range of analytics across four key product segments:

- **Diagnostic Technology:** Enabling the effective delivery of diagnostic services as they underpin the future of health and personalised medicine.
- **Clinical Decision Support:** Combining human and artificial expertise together to enhance decisions that improve care, value and experience.
- **Coding Assistance and Data Quality:** Digitising and automating workflows with data, classification, coding & technical expertise to improve information standardisation, quality and timeliness.
- **Analytics and Knowledge Networks:** Combining data analytics solutions with peer-to-peer alliances that accelerate innovation and knowledge diffusion.
